

BCCA national study on the impact of COVID-19 on patients with congenital heart disease

COVID-19 infection in Congenital Heart Disease study

COACHeD study

Has your child had COVID-19?

The [BCCA \(British Congenital Cardiac Association\)](#) is running a national study on the impact of COVID-19 on patients with congenital heart disease (both adults and children) and have reached out to ECHO for support with this.

The study examines the effect of COVID-19 infection on patients with CHD.

How to take part:

If you are eligible and would like to take part, please read the short letter attached and answer the 8 questions – and send your replies to the email address provided – or click the button below.

The results of the study will be shared with ECHO in the coming months.
